7. The metaphorical representation of knowledge

7.1. Introduction

Knowledge acquisition and transmission in the role of metaphors in chapter 7.

---

7.2. The metaphorical representation of knowledge

2003

The metaphor of knowledge is a crucial representation in understanding and processing mental processes. In the context of knowledge representation, the metaphor of knowledge is often used to illustrate how knowledge is structured, how it is acquired, and how it is transmitted. The metaphorical representation of knowledge helps in understanding complex concepts and facilitates the communication of ideas. This chapter explores the role of metaphors in knowledge acquisition and transmission, highlighting their importance in various domains, including education, science, and technology. The aim is to demonstrate how metaphors can be used to simplify complex concepts and enhance understanding. This chapter also discusses the limitations and challenges associated with the use of metaphors in knowledge representation and suggests ways to address these issues. The chapter concludes by emphasizing the importance of a balanced approach to the use of metaphors in knowledge acquisition and transmission.

7.1.2 Knowledge management: the metaphor of a journey

7.2.1 Explanation of implicit knowledge via metaphor

7.2.2 Explanation of explicit knowledge via metaphor

7.3.1 Explanation of both implicit and explicit knowledge via metaphor

7.4 Analysis of metaphor usage in the knowledge management context
knowledge management using the concept of resource management

Figure 2: Knowledge management using the concept of resource management

The idea that someone may well have valuable knowledge, but they may not have the necessary resources to manage it, is inherent in the concept of resource management. It is not only about the availability of resources, but also about how those resources are deployed and used. The key to efficient knowledge management is the effective use of available resources to support knowledge creation, dissemination, and use. This can be achieved through strategic planning, decision-making, and coordination among different stakeholders. The figure illustrates these concepts, highlighting the importance of resource management in knowledge creation.
and properly with their frequency. The case of communication can be
seen as the access to the world of community of practitioners of a
particular discipline and group. The choice of the discipline is
often based on the context of the study of knowledge management.

The concept of understanding is essential for understanding of
which we want to move towards conceptual thinking. The
understanding of the cooperation appears because it goes beyond
understanding of the cooperation among different people. A deep
understanding of the cooperation among different people.

The knowledge management process is the process of
understanding of the cooperation among different people. It can
provide the cooperation among different people. The
derivation of the cooperation among different people.
The process of understanding of the cooperation among different
people. The process of understanding of the cooperation among
different people.

The modification of knowledge is represented by the mirror.
The way of managing communication and media models in the international business environment is important. The management of knowledge transfer, the management of innovation, and the management of the dynamics of innovation are crucial. Communication and media models are key in understanding the dynamics of innovation.
